

ABSTRACT OF THE DISCLOSURE

An information recording apparatus includes first and second information recording units configured to write and read data in a predetermined amount of data units, and a control section configured to perform a switching control, such that when the data is being written in the first information recording unit in the predetermined amount of data units, in a state where a preset condition relating to a recording operation is not satisfied, the data in the predetermined amount of data units to be written in the first information recording unit is written in the second information recording unit.
